

Reproducibility review of: What are intersections for pedestrian users?"

Eleni Tomai 

2022-06-16

This report is part of the reproducibility review at the AGILE conference. For more information see <https://reproducible-agile.github.io/>. This document is published on OSF at <https://osf.io/r5w79/>. To cite the report use

Tomai, E. (2022, June 22). Reproducibility review of: What are intersections for pedestrian users? <https://doi.org/10.17605/OSF.IO/XPG6Y>

Reviewed paper

Favreau, J.-M., and Kalsron, J.: What are intersections for pedestrian users?, AGILE GIScience Ser., 3, 4, <https://doi.org/10.5194/agile-giss-3-4-2022>

Summary

The updated submission contains a DASA section and links to two repositories on GitHub, which have been updated by the author during the reproducibility review process. The first repository contains all necessary files and code for implementing the segmentation process, while the second, comprises all files necessary for using the evaluation tool. The reproduction was successful.

Reproducibility reviewer notes

After checking the DASA section in the paper I opened the repositories <https://github.com/jmtrivial/crossroads-segmentation/releases/tag/agile-2022> and <https://github.com/jmtrivial/crossroads-evaluation/releases/tag/agile-2022> on GitHub. The README provided good instructions, so I began the process. Shortly after the reproducibility process started, a bug with French characters (those with accents) was identified. Specifically, when running the `get-crossroad-description.py` script, in the “by-name” argument, when trying to generate the example using “obélisque” the French character containing the accent could not be recognized. Upon conducting the authors regarding this issue, they provided a change in the code to test on a Windows platform and when this proved to work, they uploaded an updated version that could work on pip.

All other parameters’ combinations tested when running the “`get-crossroad-desprciption.py`” have been successful. JSON and png files have been generated when using the `--to-json-all/--to-json` or `--display-segmentation/-display-main-crossroad` accordingly (See attached figures 1 to 3).

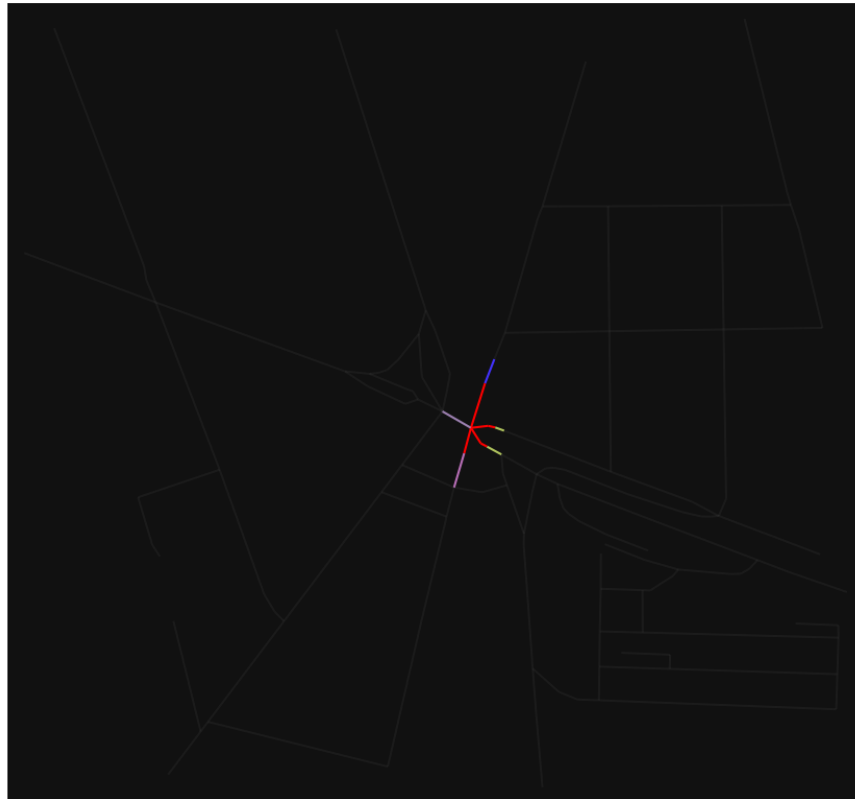

Fig. 1 The result of the combination: “`get-crossroad-description.py --by-name Nicolas --display-main-crossroad`”

Fig.2 The result of the combination: “get-crossroad-description.py --by-coordinates 48.15 2.35 --display-main-crossroad”

Fig. 3a and 3b the results of the following: “get-crossroad-description.py --by-name Delille --display-reliability --display-segmentation” and “get-crossroad-description.py --by-name Delille --display-reliability --display-main-crossroad --to-json-all Delille_rel_all” respectively.

In the updated version, warning messages were returned on two occasions:

- 1) when running the get-crossroad-description.py script and

2) when running the get-paris-streets.py script

Contacting the authors on these, and after letting them know that osmnx v1.1.2 is installed, they said that the suitable/recommended version is osmnx v1.0.2 and that they will include this clarification in the updated readme file.

Finally, the evaluation tool worked without any issues. It was tested using an Apache server on a laptop.

The images included below (Fig.4a and b) constitute screenshots of the evaluation tool upon evaluating the json file produced by running the script with the following command:

```
get-crossroad-description.py --by-name Delille --display-reliability  
--display-main-crossroad --to-json-all Delille_rel_all
```

Crossroad segmentation quality evaluation

By answering the following questions, you will evaluate the quality of a junction detection and segmentation algorithm in [OpenStreetMap](#), and participate in the [ANR ACTIVmap project](#). This tool is part of the [main evaluation toolkit](#).

Crossroad #1

osm gmaps streetview

Existing crossroad
yes

Crossroad scale
correct

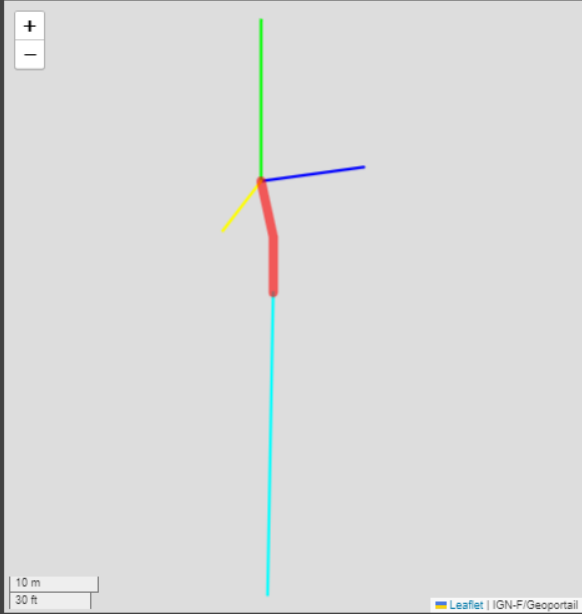

Number of branches
correct

Branches configuration
correct

Edge position
correct

Completeness
correct
